

MD ABDUL JABBAR HUSSAIN

Email: mdabduljabbar2903@gmail.com | +91-9866910355 | [LinkedIn](#) | [Github.com](#)

Professional Summary

Cloud Engineer deploying and troubleshooting applications on AWS, including EC2, ECS, Elastic Beanstalk, S3, IAM, VPC, and load balancers (ELB/ALB). Familiar with containerization (Docker, Kubernetes), CI/CD pipelines (Jenkins, GitHub Actions, GitLab CI), and Infrastructure as Code (Terraform, CloudFormation). Skilled in version control (Git), scripting (Bash/Python), and monitoring tools (CloudWatch). Focused on building scalable, reliable systems and efficient APIs.

Technical Skills

Platform & Tools :- Linux (expert), AWS Services(Cloudformation, EC2, S3...)Git, Docker, Kubernetes, Terraform, Jenkins, Gitlab, Microsoft Excel(input-process-output, maintainability, Data entry & autofill, Sorting & filtering, Advance analysis)

Programming languages :- SQL, Bash, Python

Frameworks:- Serverless Frameworks(AWS Lambda, SQS), Spring Boot, Data streaming/processing frameworks

Internships

Agratas edutech Machine Learning I machine learning virtual internship (Nov 2024 – January 2025)

- performed and enhanced my skills in python programming
- performed and enhanced my skills in machine tools , exceptions , file processing , machine learning algorithm

Amazon Web Services I solutions architect internship at AWS (oct 2024)

- performed and enhanced my skills in architecture in Web services

Education

Jawaharlal Nehru Technological University Hyderabad (JNTUH) 2021 - 2025

- Computer Science & Engineering | CGPA: 6.03

S.R Nava Vignana Bharathi Junior College 2019 - 2021

- MPC

Projects

Project 1 – [Predicting Diamond Prices with ANN using Deep Learning](#) (2025)

- Built an Artificial Neural Network (**Keras/TensorFlow**) to predict diamond prices from a ~54,000-record dataset using features like carat, cut, color, clarity, and dimensions, achieving an R^2 of 0.999 and MAE of ~33 on held-out test data.
- Deployed the trained model as an interactive web app using **Flask**, enabling real-time diamond price predictions from user-input attributes via a custom HTML front end.

Project 2 – [Train a Machine Learning Model Using Amazon Sagemaker](#) (2026)

- Preprocessed a household income/poverty-level dataset in Amazon SageMaker, handling missing values across multiple features using **domain-driven imputation logic** and correcting inconsistent household-level labels.
- Built a Random Forest classifier in SageMaker to predict household income/poverty level from **socioeconomic** and demographic features.

Project 3 – [Database Migration](#) (2026)

- Designed and executed a cloud database migration using **AWS Database Migration Service (DMS)**, migrating a MySQL database from a source Amazon RDS instance to a target RDS instance with zero data loss.
- Configured AWS DMS components end-to-end — **source/target endpoints, replication instances, and migration tasks** — to enable reliable, automated database replication between environments.

Project 4 – [Deploying Netflix website using ECS](#) (2026)

- Containerized and deployed a web application on **Amazon ECS (EC2 launch type)**, configuring a **cluster**, task definitions, and services to run and manage Docker containers at scale.
- Implemented core AWS container orchestration concepts — **task definitions, services, and cluster auto-scaling** — to deploy a Docker Hub-hosted image in a production-style AWS environment.

Project 5 – [End to End Generative AI Application on AWS](#) (2026)

- Designed and built a serverless Generative AI application on AWS, architecting a request flow through **Amazon API Gateway** → **AWS Lambda** → **Amazon Bedrock** for AI-powered response generation.
- Integrated Amazon SageMaker into the pipeline to support model training and fine-tuning, enabling **customized AI responses** beyond out-of-the-box foundation models.

Certifications

- Agratas edutech Machine Learning - [Machine Learning](#)
- Solutions Architect in Amazon Web Services(AWS) – [Solutions Architect](#)
